Feedbacks

We first gave team 2's leader *Thomas Abadines* team 1's Zoom link and all 4 of them showed up and gave us very solid feedback. We first presented our homepage asking team 2 how our UI looks, and they told us we chose a very good color scheme. They also like how we subgrouped different sections out using Airbnb's similar card UI section. We then moved onto user authentication designs and team 2 said our forms were very nicely created. After showing user authentication designs, we then showed them our trial information pages. After asking for solicited advice on our post-trial page and navbar search functionality, a few things to reconsider when we are coding our project is that we should remove the button to show the search bar and simply have the search bar shown at all times. On our post-trial page, we should reconsider refactoring the "Eligibility" part, since it might be deemed as confusing to our clinical users. Lastly, for the recording of the information team 2 has provided for us, we used Zoom's recording button. Also using Google Docs, we wrote down, what needs to be changed and improved on in terms of our search bar and the post-trial page. Other than that, we created a good UX and UI design.

Summarize feedback obtained during focus group

- The search bar might need to be redone
- Great UI
- Good coloring scheme
- Clean looking design
- Professional looking
- The wording could be more clear in certain areas

Plans for what to change in design

- Remove the button to show the search bar and simply have the search bar shown at all times.
- Reconfigure instances of vague wording to be more clear.
