1 - Executive Summary

In order to successfully launch a new drug out to the market, medical companies must rely on human participants to perform clinical trials for each specific drug. The process to find participants for certain trials is very time-consuming, and as each day goes by without the ability to test these new drugs, the potential profit will decrease. The decrease in potential profit isn't the only problem medical companies have to face, but in fact, it's the approval from the FDA. The faster they find participants, the potential profit will increase, and the higher chance to receive approval, if clinical trials are successful.

To help speed up the process, for the medical companies, in finding participants for their clinical trials, our team will create an application, allowing participants to search for trials, choose in which to participate, and to be paid for testing different types of drugs. Participants have the ability to browse around and sign up for different medical trials if they pass all the specified requirements listed for those trials.

For medical companies, they have the ability to upload various drug trials allowing them to find the right participants, once they fit the requirements of the trial. Each trial contains different procedures, so, therefore, medical companies can also upload images or videos to help give their participants a quick preview before they actually sign up for the trial.

2 - Storyboards

Student Use Case

- 1) Tim noticed on the front page of the website, a section listing the payouts for each of the trials

The screenshot shows the Participaid homepage. At the top, there's a navigation bar with the logo 'Participaid', a search icon, 'SIGN IN', and a 'SIGN UP, IT'S FREE' button. Below the navigation, a large banner features the text 'Medical Companies don't hold power over drugs future you do!' and a 'Start Exploring' button. To the right of the banner is a stylized illustration of a person standing next to a large, dark, crumpled shape. The main content area is titled 'Highest payouts' and lists four clinical trials with their respective payouts:

Payout (\$)	Study Description	Participants	Eligibility & Requirements
\$180	Long-term Safety and Efficacy Study for Individuals Who Are Long Term Smokers	Smoker Participants	✓ 21 and older ✗ Peanut Allergies ✓ Allergy Test Required ✗ Non smoker ✓ Smokers ✓ Gender Neutral
\$150	Drug-Drug Interaction Study Assessing Effect of nonsteroidal anti-inflammatory drugs in Healthy Participants	Healthy Participants	✓ 20 - 50 years ✗ Drug Allergies ✓ Allergy Test Required ✗ Non Healthy Participants ✓ Healthy Participants ✓ Gender Neutral
\$140	A Clinical Trial to Assess the Safety, Tolerability and Immutability of Meningococcal vaccine in Healthy Infants	Healthy Infants	✓ 2- 6 months ✗ 7 months and up ✓ Allergy Test Required ✗ Non Infants ✓ Infant ✓ Gender Neutral
\$130	Infliximab Biosimilar for Intravenous Drip Infusion 100 mg "Pfizer" Drug Use Investigation (Psoriasis)	Psoriasis Participants	✓ Psoriasis Vulgaris ✗ Drug Allergies ✓ Allergy Test Required ✓ Psoriasis ✓ Gender Neutral

Participate without complications.

Tim goes to our homepage and noticed “Highest Payout” section

2) After seeing the payouts, Tim now proceeds forward to search and read the descriptions of each trial, including all the legal information, legal disclosures, and the application rules for each specific trial. He is hoping to see if he can find one that performs certain allergy tests before applying.

Description

This is a Phase 1, clinical trial for long term smokers that will be performed in San Francisco.

This study will enroll a sufficient number of participants to see any side effects related to smoking .

Tim proceeds to search for the highest payout (\$180) then he reads a snippet description for that trial. He then sees all the legal and rules for that specific trial.

- 3) Once one has been found, he now must sign up for an appointment to perform an allergic test for the drug that will be used in the trial or upload his test results. His appointment information will be sent via email.

Medical Professional Use Case

- 1) Allison is working at a pharmaceutical company. When she was working, she saw a lot of medical trials that were complicated medical usage and technical terms that made it difficult for applicants to participate. She wants the page to be easy to understand and accessible to a wide variety of participants. She understands most of the medical terms, but she is uncomfortable with any kind of technology that is complicated to use.

Medical Companies don't hold power over drugs future you do!

- All trials must be reviewed and accepted before scheduling.
- By submitting for review, I have agreed to [Terms and conditions](#).

Submit For Review

When medical professionals are ready to schedule a trial, all they have to do is submit a trial form for review.

Office Worker Use Cases

- 1) Grant is a 9-5 office worker. He has had back pain for years but over-the-counter medicine stopped working for him. He was looking for the medicine and trial that worked for him all over online but most of the trial procedures conflicted with his work time frame. And he saw on the website some of the trials that he can participate in without conflict with his work.

Participate without conflicts

A Study in Back Pain Discomfort	Study of the Efficacy and Safety of Somatropin in Korean Participants With PWS	Talazoparib + Enzalutamide vs. Enzalutamide Monotherapy in mCRPC	Safety and Efficacy of Lorbrena

This section is suitable for Grant because he can participate in any trials within this section without any conflict issues with his personal life.

- 2) He is looking for a page that describes the medical term simply to understand non-medical professionals.

3 - Functions

Priority 1

1. Allow pharmaceutical companies to schedule medical trials that can be applied for by users.
2. Allow users to search for their desired medical trials.
3. Allow users to apply for medical trials
4. Allow participants to schedule appointments with pharmaceutical companies.
5. Allow pharmaceutical companies to sign up for an account.
6. Allow participants to signup for an account
7. Allow participants to see all the required details before applying.
8. Create card sliders for different sections on our homepage for participants to browse trials.
9. Allow pharmaceutical companies to upload their legal documentation for their scheduled medical trials.
10. Allow participants to explore all trials.
11. Allowing participants to upload their own “test result” image.
12. Allow pharmaceutical companies to collect data from applied participants from their scheduled trails
13. Allow participants to see their applied trials.
14. An Account Settings page for participants/ pharmaceutical companies
15. Allow users to logout of their account
16. Persistent login

17. Medical details page for participants. _____

Priority 2

1. Allow participants to receive their appointment details via email.
2. Allowing pharmaceutical companies to upload videos for their scheduled medical trials.
3. Allow participants to delete their account
4. Allow participants to accept the cookie consent
5. Allow users to update their password.
6. Allow users to update their email.
7. Allow users to update their personal details.
8. Allow participants to see their prerequisite results for their applied trails.
9. Import Google Maps in the trial description page

4 - Improvements Over Key Competitor

1) [Clinicaltrials.gov](#)

When a user proceeds to clinical trials websites, they will first prompt the user to “Find a study”, allowing users to search for the desired trials. However, the implementation of this functionality is not user-friendly. Instead of doing it this way, we will have a navbar with search functionality, and also a drop-down functionality. The drop-down functionality allows users to see what types of trials are available to them. The search functionality will filter out their desired results and show results on a new page. This allows the user to search for their desired trials much faster than the clinical trials websites.

In [Clinicaltrials.gov](#), users first have to do a search approach before allowing them to see all the trials. What our team has done differently is instead of first prompting the user to search for trials before displaying these trials to their user, we will show different trials to users on our homepage. (*see next page for more details*)

Medical Companies don't hold power over drugs future you do!

clicking on “Study Title” on their website will navigate you to that specific trial record

Row	Saved	Status	Study Title
1	<input type="checkbox"/>	Recruiting	SBRT in Early Breast Cancer in Elderly Women NEW

After navigation, it will bring you to a new page that shows all the necessary information regarding that trail. However, the details page doesn't have enough white space to space out different sections, and because of this, there is no visual hierarchy. Also, there are a lot of major sections on this website that can be a priority than other sections, which should be placed before the non-prioritized sections. Lastly, the user does not have any way of applying or to schedule an appointment for any trails listed on their webpage.

What we have done differently is put coloring for each section title, and also add enough white spacing for the user, and only show all the major requirements that are needed for that specific trail. We also created the functionality of appointment submissions, a map locating the trails and a way for users to apply for their desired trials. (*see next page for more details*)
